

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are used on lift masts so as to help them work in difficult environmental surroundings. Lift masts are often subjected to oscillations, shocks, high dynamic and vibrations and static loads. This equipment is frequently exposed to environmental influences like for example dust, cold, heat, aggressive ambient air, moisture and contamination. Thus, the lift masts' guidance arrangements need to be particularly strong and have a certain high load carrying capability.

Carriage rollers have been developed as the solution for functioning in different environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts need to be economical and maintain operational security while having the ability to deal with a specifically high load carrying capacity.
