

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is a tool made out of top quality materials intended to be able to endure the most demanding operations and work environments. This particular piece of equipment could enable the one driving to maneuver the blades hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms in order to facilitate much more precise carrying and placement in a quicker and more effective method.

The fork pocket is quite unique and could enable the person operating it to be able to securely sway the forks into position without any fear of damaging the positioning cylinders. This can allow the driver the choice to execute simultaneous or independent fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on available units.
