

Aerial Work Platform

Aerial Work Platforms - There are lots of accessories designed for lift trucks which can be used in order to help expand the capabilities of your lift truck and allow you to carry stuff, handle materials with greater ease or to finish clean-up jobs.

Many of the accessories are particularly designed to be able to fit on the blades themselves. Blade extensions for example, are used if you require much more fork length, which increases lifting capacity. Blade extensions come in lengths varying from 48-120 inches. Triangular or rounded attachments are another type used if transferring rolled material in order to make certain it does not roll off of the standard flat blades.

Lifting accessories can be pivoting and telescoping crane attachments. They come in various kinds. These attachments are often designed for transporting poles, lumber, metal bars or any sort of bulky objects. Other attachments like for instance other kinds of hooks and hook plates are existing to be able to lift things utilizing a chain or sling. Slab lifters and magnetic filters are other items which could be used with hook accessories. Slab lifters are specialized accessories that are used for picking up various materials that are delivered in a sheet or slab format. Rug rams or carpet poles are other lifting tools that attach to your forklift to be able to make transferring rolls of carpet easier. The accessory connects onto the lift truck's blades and has a pole that goes through the middle of the carpet roll.

There are many different kinds of lift truck accessories which could be designed for facility maintenance such as snow blades. These blades connect to front end loaders and could move materials like snow, dirt and soil. Other common cleanup attachments comprise standard sweepers and magnetic sweepers. Standard sweepers includes a broom which the forklift forks connect onto for sweeping large spaces such as parking lots or warehouse and factory floors. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is used in areas where there is lots of metal debris like on shop floors for example. Sweepers have widths as much as 60 inches and this surface area makes clean up fast and easy.

A material spreader is one more forklift accessory which is normally used at facilities. These spreaders are handy for a variety of applications like spreading seeds, ice melt, rock salt, pellets, fertilizers and insecticides.

Work platforms are another optional lifting attachment which many businesses use day by day. The platforms range in size from 36" x 36" to up to 60" x 60". There are a few units offered which are capable of folding up and storing into a smaller space. Work platforms are designed to raise employees up to an overhead location making use of the forklift. Larger platform units have additional space for workers so as to carry tools and other essential items intended for the task. Usually work platforms are constructed of poly material or steel.
