

Toyota Forklift Part

Toyota Forklift Parts - In the United States, Toyota Materials Handling inc., or TMHU, has been the top selling lift truck supplier since 1992. This company has been based out of Irvine, California for well over 40 years, providing a wide-ranging line of quality lift trucks. With a distinguished reputation of stability and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the cornerstone of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S.A are built here.

All Toyota's manufacturing plants within Canada and the United States comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its dedication to constant improvement, and its environmental methods. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For instance, the Toyota 8-Series IC lift trucks emit 70 percent less smog forming emissions than the existing centralized EPA standards and have complied with California's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

Brett Wood, President of TMHU, links Toyota's success to its robust dedication to constructing the best quality lift trucks while delivering the utmost client service and assistance. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues."• TMHU's parent company, Toyota Industries Corporation, also referred to as TICO, is listed in Fortune Magazine as the world's principal lift truck provider and is amongst the magazines celebrated World's Most Admired Companies.

New Meaning to Environmental Responsibility

Toyota's parent company, Toyota Industries Corporation, has imparted an exceptional corporate ideology towards environmental stewardship within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability can not be matched by other organizations and unquestionably no other resource handling manufacturer can yet rival Toyota. Environmental responsibility is an important aspect of corporate decision making at Toyota and they are proud to be the first and only manufacturer to provide UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift trucks. Yet another reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission values, and also meets California's more elaborate 2010 emission standards. The finished product is a lift truck that produces 70 percent fewer smog forming emissions than the present Federal standards allow.

Also starting in 2006, jointly with the Arbor Day Foundation, Toyota added to its dedication to the natural environment. To this day more than 58,000 trees have been embedded in the ground throughout national forests and local parks that were damaged by fires and other ecological causes. 10,500 seedlings have also been spread through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood consumers to help sustain communities all over the U.S.

Toyota's lift vehicles offer improved strength, visibility, productivity, ergonomics, and all the foremost safety equipment that has made Toyota an industry leader. The company's System of Active Stability, often known as "SAS"•, helps decrease the chance of accidents and accidental injuries, in addition to increasing productivity levels while minimizing the potential for merchandise and equipment breakage.

System Active Stability senses several elements that might lead to lateral volatility and potential lateral overturn. When one of those factors are detected, SAS instantaneously engages the Swing Lock Cylinder to stabilize the rear axle. This transitions the lift truck's stability trajectory from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the probability of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding durability.

The SAS systems were initially utilized on the 7-Series internal combustion lift trucks which were put on the market in 1999. These systems helped drive Toyota into the lead for industry safety standards. Now, SAS is adopted on practically every new internal combustion models and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with mandatory worker training, overturn fatalities across all brands have decreased by 13.6% since 1999. Furthermore, there has been an overall 35.5% reduction in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's standard of excellence reaches far beyond its technological achievements. The company maintains a widespread Operator Safety Training curriculum to help users meet OSHA standard 1910.178. Instruction courses, video tutorials and various materials, covering a broad scope of topics-from personal safety, to OSHA regulations, to surface and load conditions, are offered through the dealer network.

Toyota has maintained a continuous existence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, created its 350,000th lift vehicle. This reality is demonstrated by the statistic that 99% of Toyota lift trucks sold in America at the moment are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of property.

Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service components, with the whole investment exceeding \$113 million dollars.

The new National Customer Center was conceived to serve both sellers and customers of TMHU. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live merchandise demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its originator, Sakichi Toyoda, in 1867, and lastly a education center.

TMHU has 68 authorized industrial equipment dealers, along with 189 dealership locations all through the United States, providing the most comprehensive and inclusive customer support and customer service in the industry. The company's new and Certified Used lift vehicles, service, parts, and financing features make Toyota dealerships a one-stop shop to ensure overall customer satisfaction.
