

Drum Clamp

Drum Clamp - Forklifts are really used to lift, move and store items placed on pallets. For companies which make use of drums, they usually need an attachment so as to handle moving, storing and lifting them. There are a few different attachments that a business can utilize for all your drum lifting, moving, and storing needs. These attachments are specifically utilized so as to deal with drum containers - hence there is no risk of damage to the product or drum container when they are lifted, stored or moved.

Drum Positioner And Grab

The drum positioner is available in three and four tine models. They are operational for the loading and unloading of drums off vehicles, drum stands and racks. This particular accessory is completely automatic, thus allowing the individual operating it to be able to operate all from the comfort of the lift truck seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This accessory is used for drum pyramid stacking.

The drum grab can be mounted to the forks, with a designed purpose of handling steel drums that have rolling hoops. Though the original purpose for the design was to handle steel drums with rolling hoops, the drum grab can help accommodate plastic drums also. Drum capacity maximum is 220 liters for plastic barrels and 210 for steel drums with rolling hoops.

The Rotator

The drum rotator is another lift truck accessory that mounts onto the blades themselves. Their objective is to be able to lift the drum and turn it upside down. The drum is clamped into the drum rotator with a clamp that fits around the center of the drum. The rotation is executed by either a continuous loop chain or a crank handle. The crank handle is for operations that take place below shoulder level. For operations that must occur over shoulder level, the continuous loop chain will be used.

The drum tines are carriage mounted or simple fork attachments. They are utilized for unstacking and stacking 210-liter steel drums. Stacking involves nothing elaborate, merely simple horizontal placement of the drums. The carriage-mounted enhancements lessen the load center of the drums.

Automatic Tongs

Drum tongs are accessible both automatic and semi-automatic models that can be utilized in the open topped and tight head steel drum styles. The drum tongs can also be connected several different ways to the lift truck. One way is to attach them beneath a fork-mounted hook. One more way is to attach them to a carriage mounted jib or a fork-mounted jib. Both the semi automatic and the automatic have a drum capacity of 210 liters. With the automatic, there is no requirement for the one operating it to ever leave the seat of the forklift.

Rim Grip Handler

Whenever drums need storage space with limited area obtainable, the Rim Grip Drum Handler is the best option in drum forklift accessories. This attachment would work for both the two hundred ten liter drums as well as one hundred twenty liter drums. The Rim Grip Handler works by utilizing steel jaws to hold the edge of the drum. It lifts the drum and sets it down without needing any space between all the drums. The typical model in the trade is a zinc-plated handler, even though, this attachment comes accessible in stainless steel for the food and drink market.
